## PROFILE

I'm passionate about Video Game Digital Art, and have a great affection for interactive and creative contents. Curious and always fully invested in my projects. My particular affection for the Sciences, New Technologies like AR and VR and Digital Art bring me to work for companies like the European Organization for the Nuclear Research and Reality Reflection (South Korea) where. Thanks these opportunities I acquired a wide range of various and pluridisciplinary skills to consistently meet and exceed expectations on delegated work. Serious and enthusiastic, my open-mindedness and my reactivity gave me the ability to learn new tools and concepts quickly while working independently or in a team environment.

## SKILLS

C#

Unity 3D
